The import and export of the material settings is possible in Dental System Control Panel.

Dental System Control Panel is started by clicking the corresponding icon either from Dental Manager or from the desktop.

The import and export functionality in Dental System Control Panel provides an easy exchange of materials between the lab and the manufacturer. Click on the **Export/Import** button to open the window below:

**Tools + Import/Export**

**Tasks**

- Export materials
- Import materials

**Import of materials**

Click on the **Import materials** button (or ) to open the window below and select the desired folder:
August 10, 2012

As you see on the image above, the import functionality allows the import of both DME and ISL files.

Click on the Import button in the window below to import the implant system library and the corresponding materials.
